**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 9 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishizaki et al [US 6,516,278 B1].

With regard to **claim 9**, Ishizaki discloses a device for an actuator system for a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising:

- An arrangement for performing a first comparison of a first signal from the contact sensor system to a threshold (column 2, lines 15-33 and column 6, lines 45-52); and
- An arrangement for changing one of the threshold and the first signal as a function of a second signal of the environment sensor system, the actuator system being activated as a function of the comparing (column 2, lines 15-33; column 6, lines 7-19; and column 6, lines 60-65).

As for **claim 16**, the first signal itself is used for comparison (column 2, lines 15-33).

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
  2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
5. Claims 10, 11, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over unpatentable over Ishizaki et al as applied to the claims above in view of Eisele et al [US 6,678,599 B2].

As for **claim 10**, Ishizaki does not specifically disclose that the first signal is compared to a noise threshold. In an analogous art, Eisele discloses a system wherein a signal is compared to a noise threshold to ascertain a starting point for a comparison (column 1, lines 37-61). Since both inventions disclose impact detecting systems, it would have been obvious to one having ordinary skill in the art to modify the invention of Ishizaki to include a means for adjusting the invention for noise as taught by Eisele, in order to yield the predictable result of a system capable of more accurately determining impact with a vehicle and protecting a pedestrian by accounting for spurious noises that may adversely affect sensor readings.

As for **claim 11**, the second signal includes a relative speed (Ishizaki, column 6, lines 7-19).

As for **claim 15**, Ishizaki discloses an arrangement for integrating the first signal comparison at least once (column 2, lines 16-23). Eisele also discloses integration (column 2, lines 5-23).

#### *Allowable Subject Matter*

6. Claims 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
